

## UWS | Electric Window Control Equipment

Electric window controls allow windows to become operable at the flick of a switch or at the pressing of a button on your hand held remote.

It does not matter if the windows are at floor level or a couple of levels up and out of reach, opening your windows has never been easier.

Why not have passive ventilation cool your home, school or office?

It will increase the thermal comfort of the occupants and keep running costs down while helping the environment.

There are specific designs for use on all types of windows. It does not matter if you are after a system for louvres, awnings, sliders or for elliptical sunshade louvres, we have a system for them all. We have also recently worked on a system for the control of vertically acting bifold shutters!

Durable installations incorporating the Torque Rod system are great for schools or some of the more industrial of applications.

Alternatively installing a 'Motor per Point' gives a great slim line finish and is virtually maintenance free.

Complimentary systems to the standard electric window controls are numerous. They include failsafe battery backup, connection to Building Management Systems (smoke ventilation or nightly purges etc.) and environmental sensors like ones for rain.

The applications of our products are wide ranging and should you have any questions we would welcome your enquiry.
