

## Rain Sensor | General Information

How many times have you been at work, heard a storm warning and said but I have the washing on the line and my windows are open!!!!

There is not much we can do to help with the washing but the windows are a different story.

Installing a rain sensor with your electric window controls will give you some peace of mind when the storms come rolling in. Whether it is your home, your school or your office the functionality of this device could save you a costly cleaning bill or messy insurance claim.

Placed on the roof, the rain sensor will send a 'close' command to the

controlled windows at the first drops of rain. This signal will continue until the sensor pad is dry again. Once the signal has ceased the occupants will again have full control of the windows and can open them at their leisure.

To ensure this happens in a timely manner there is a small 'heater' in the sensor. This works to evaporate the water as soon as possible halting the 'close' command.

Feel free to call us and discuss this option as it does add a very useful element to any automated window system.

## Rain Sensor | Features

- In-built circuit board
- Quick and easy to set up
- Compact size
- ????????

## RF Remote Control | Specifications

VOLTAGE	24vDC
LOAD CAPACITY - PUSH/PULL	Not Applicable
LOCK FORCE	Not Applicable
CURRENT UNDER LOAD	Not Applicable
STROKE LENGTH	Not Applicable
STROKE SPEED AT FULL LOAD	Not Applicable
OPERATING TEMPERATURE RANGE	10°C to 80°C
LIMIT SWITCH	Not Applicable
IP GRADE	Not Applicable
ELECTRIC OVERLOAD CUT OFF	Not Applicable

## Rain Sensor | Specification Text

The automated window control system is to be interfaced with a Rain Sensor located externally on the building in a position that will not be impeded from rain.

The sensor is to be a Dual PCB type available from Unique Window Services 07 32655771.
